SUMMARY

Full Stack & AI Software Engineer with nearly 4 years of experience building enterprise web platforms, AI-powered applications, and scalable FastAPI/Python backends. At Data Alpha AI, delivered four production AI products across portfolio analytics, financial-data infrastructure, natural-language BI, and go-to-market automation — owning each end-to-end from requirement to deployment, spanning React/Vite frontends, Claude API integration, and Docker/VPS release. Combines strong MERN full-stack fundamentals with hands-on applied-AI engineering (LangGraph agents, MCP, prompt engineering), and ships reliably to production on tight timelines.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, SQL, C++
Frontend	React.js, Next.js, React Native, HTML5, CSS3, Tailwind CSS, Material UI, Three.js, Vite, Webpack, Axios, Microfrontend Architecture, npm / Yarn
Backend & APIs	FastAPI, Python, Node.js, Express.js, Django, C# / ASP.NET, REST API design, GraphQL
AI / GenAI	Claude API, LangGraph (multi-node agents), MCP (Model Context Protocol), AI agents, prompt engineering, agentic workflows, LLM integration
Databases	MongoDB, Snowflake, MySQL, Firebase
DevOps & Infra	Docker, Git, GitHub, CI/CD, GitHub Actions, Portainer, VPS deployment, Vercel, Railway, Heroku, Netlify, Postman
Testing	Jest, React Testing Library
Automation	Playwright, Apollo API, HubSpot API, Streamlit

EXPERIENCE

Full Stack Engineer / AI Software Engineer — Data Alpha AI

DEC 2025 – PRESENT

- Delivered four production AI products — portfolio analytics, financial-data infrastructure, natural-language BI, and go-to-market automation — taking each end-to-end from requirements through Docker/VPS deployment, adopted by internal teams and used in client demonstrations.
- Owned the full stack per product: React/Vite frontends, FastAPI/Python backends, Claude API orchestration, and release via Docker and Portainer/VPS, taking each product from idea to working demo in a matter of days rather than weeks.
- Translated business requirements from leadership into working AI proofs-of-concept, enabling client-facing demonstrations across multiple engagements and reducing manual effort on portfolio review, lead qualification, and reporting tasks.

KEY PROJECTS

- Nexus AI v2 — Agentic Portfolio Rebalancing Platform

LangGraph · FastAPI · React/Vite · Claude · yfinance

Built an 11-node LangGraph state machine that ingests portfolio CSVs, pulls live prices and 7/30-day trends from Yahoo Finance, aggregates sector news via a 3-tier source fallback (Event Registry → Finnhub → mock), and uses Claude for 5-level sentiment classification. Fused return, sentiment, trend, allocation, and risk into a weighted 0–100 composite driving a 7-action recommendation engine (Strong Buy → Strong Sell); shipped across CLI, FastAPI, and a React dashboard.

Local Stock Analyst — Financial-Data MCP Server

Python · MCP · 10 data providers

Architected a Model Context Protocol server exposing 50+ financial-analysis tools across 9 domains (market, stocks, technical, fundamental, options, risk, news, screener, portfolio), backed by 10 fallback-routed data providers including Finnhub, Alpha Vantage, FMP, and SEC EDGAR. Added in-memory TTL caching, per-provider rate-limit guards, and dual stdio/HTTP transport for Render deployment.

GTM Intelligence Platform — Scraping & Enrichment Pipeline

Python · Playwright · Apollo API · HubSpot

Automated the marketing team's lead research with a 3-tier scraper (httpx + BeautifulSoup → deep-link scan → headless Playwright) and a 6-source fallback waterfall (Bing, Brave, DuckDuckGo, team-page, Tavily, Apollo) for company LinkedIn/ website resolution. Scores and ranks decision-maker profiles, enriches verified work email and direct dial via Apollo, and syncs qualified contacts into HubSpot CRM.

AI-Powered Snowflake Dashboard Generator

Streamlit · Claude · Snowflake · Docker

Built a natural-language analytics layer over Snowflake: users describe a chart in plain English, Claude generates the SQL, and the app validates it, auto-corrects on failure, and renders interactive charts. Added a data-assistant chatbot, MFA-secured auth, SQL-injection guardrails, TOML-driven per-database semantic layers, and a production Docker deployment on Portainer.

- Front-End Developer — Paisalo Digital Limited

JAN 2024 – DEC 2025

Built and structured a new ERP system in React.js, Three.js, and .NET REST APIs, delivering multiple internal modules with a reusable UI component library.

Shipped production school websites (Delhi Public School Indore, Delhi Public School Taj City) on the same React/.NET stack.

Integrated SQL databases and .NET backend services; collaborated cross-functionally to ship features on schedule.

Senior Web Developer — AeroTrav

JUN 2023 – DEC 2023

Designed and built a flight-booking platform in React.js and React Native, integrating Stripe and Razorpay payment gateways.

Owned frontend architecture and cross-platform UX consistency within a cross-functional product team.

Full Stack Web Developer Intern — NullClass

OCT 2022 – APR 2023

Shipped 3+ web applications in React.js with responsive UIs built in Figma, Material UI, and Tailwind CSS.

EDUCATION

Master of Computer Applications (MCA) — Lal Bahadur Shastri Institute of Management, Delhi

2020 – 2022

Bachelor of Computer Applications (BCA) — Shree Guru Gobind Singh Tricentenary University, Haryana

2017 – 2020
